

H₂S Services

CROSCO's H₂S service provides protection from H₂S and other dangerous gases. A complete range of the most advanced detection equipment is provided ranging from fixed monitoring gas detection systems and multi-gas detectors to manual and personal gas detectors. Breathing equipment, including various breathing apparatuses as well as high pressure bottle and compressor racks, is provided for the most dangerous conditions. CROSCO's operators are experienced, trained and certified to work in the most challenging dangerous gas environments. H₂S service has been provided onshore and offshore since 1997.
