

Fishing & Well Control Services

CROSCO's highly skilled fishing teams apply practical field experience with industry leading cutting and milling technology and with a comprehensive range of fishing tools. Successful performance and results are ensured with CROSCO's approach that combines practical field experience with engineering and innovative technology.

Fishing services are provided in both open and cased hole applications and include: removing wellbore obstructions, casing and tubing cutting services, side tracking and milling operations and plugging of permanent packers and mechanical plugs. Services are supported by a well equipped and supplied facility that provides quick access to spare parts and redress of fishing and tubular tools and two Power Swivels BOWEN S-2,5 units and one Power Swivel BOWEN S-3,5 unit.

Fishing services have been provided onshore since 1954 and offshore since 1972.
